ABOUT US

A QA-first technology partner

Fancium Technology was founded in January 2025 in Dhaka. Businesses were hiring one agency for software, another for marketing and a third for IT hardware, and spending their time coordinating them. We brought those disciplines together so clients work with one team, one contract and one point of contact.

Our founding team comes from software quality assurance, engineering and digital marketing. Quality runs through everything we deliver: every project has a test plan, automated checks for its core flows and a QA sign-off before release.

2025	10	7	100%
Founded in Dhaka	Services under one roof	Projects showcased	QA-tested before every release

What we stand for

Quality built in

Every project ships with a test plan, automated tests and a QA sign-off.

One team, end to end

Software, testing, security, marketing and IT under one contract.

Flexible engagement

Fixed-price projects, monthly retainers or dedicated team members.

Transparent by default

Weekly demos, shared boards and an NDA before every project.

Industries we serve

Government & civic tech · Real estate & construction · Retail & e-commerce · Healthcare · Finance & fintech · Education · Manufacturing & supply · Startups & SMEs

SERVICES

Ten services, one team

Software Development

Web apps, mobile apps, ERP/POS/CRM and custom business software.

Web applications · Mobile apps · Business systems

QA & Software Testing

Manual and automated testing, API and performance testing.

Manual and exploratory testing · Test automation · API testing

Cyber Security

Security testing, vulnerability assessments, audits and staff awareness.

Web and API security testing · Vulnerability assessment · Security audits

Dedicated Resources

Skilled developers, QA engineers and designers working inside your team.

Developers · QA engineers · Designers

Digital Marketing

Social media management, SEO, paid ads and content.

Social media management · Search engine optimisation · Paid advertising

IT Infrastructure & Hardware

Computers, networking, CCTV and servers, with installation and maintenance.

Hardware supply · Networking · CCTV and security

Cloud Solutions

Cloud infrastructure, migration and DevOps on AWS and other platforms.

Cloud migration · DevOps and CI/CD · Infrastructure set-up

IT Consulting

Technology strategy and roadmaps for sustainable growth.

Technology strategy · Product discovery · Vendor and tool selection

AI & Machine Learning

Automation and data-driven insights powered by AI.

AI assistants and chatbots · Process automation · Data insights

Complete Business Package

Website, software, branding, IT setup and marketing, all in one plan.

Brand identity · Website · Business software

HOW WE WORK

From first call to long-term support

STEP 01

Discovery

We learn your goals, users and constraints, then agree scope, timeline and budget. An NDA comes first if you need one.

STEP 02

Plan & design

Requirements, user flows and designs you approve before any code is written, plus a test plan from day one.

STEP 03

Build in sprints

Two-week sprints with a demo at the end of each, so you see progress and steer early.

STEP 04

Test

Functional, regression, API and performance testing, with automation for the core flows.

STEP 05

Launch

User acceptance testing with your team, deployment and a full handover of code and documentation.

STEP 06

Support

A warranty period after launch, then optional monthly support and improvement plans.

Engagement models

Fixed-price project
Clear scope, timeline and price agreed up front.

Monthly retainer
Set hours each month for ongoing work and support.

Dedicated resources
Developers, QA or marketers working inside your team.

- ✓ NDA before every project
- ✓ Weekly demos & shared boards
- ✓ You own 100% of the code
- ✓ Post-launch warranty

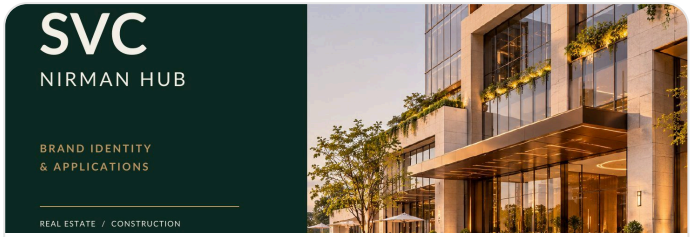

SELECTED WORK

Projects we've delivered

GOVERNMENT & CIVIC TECH

Fancium Election Management System

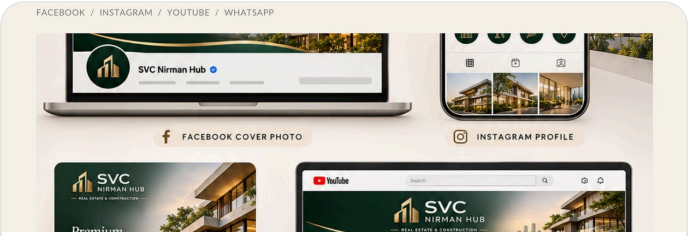

A web admin dashboard and an Android volunteer app for running election field operations.

REAL ESTATE & CONSTRUCTION
